Re: Cosmetic Fragrance Allergens

Product: 410 APRITONE, Lot 2023059-0005

Quantitative analysis has been performed on April 20th 2023 for APRITONE (BRI 410) using EN 16274:2021 (SCCS/1459/11) for 57 fragrance allergens (and isomers) with specifications at 20 mg/kg(ppm) for each named allergen.

The material itself has no correlation or relation to the listed 57 fragrance allergens defined below with the exception of Damascone beta (E) (CAS 23726-91-2), Linalool (major form) (CAS 78-70-6) and Geraniol (CAS106-24-1).

282 ppm Damascone beta (E) was reported to be present in the tested material and is known to be present at a maximum content of up to 0.05% or 500 ppm in each released lot.

Linalool (major form) and Geraniol were less than the detection limit (<20 mg/kg) in the tested material but are known manufacturing impurities that can be found up to 50 ppm (0.005%) and up to 60 ppm (0.006%) respectively.
