3.8. Substances proposed for declaration as "Allergens"

This is a composite of lists proposed by the SCCS and Cosmetics Europe (ex-COLIPA). Levels arising from their presence in natural ingredients and as impurities in synthetic ingredients are listed in the "Indirect N" and "Indirect S" columns respectively. These are calculated concentrations and do not replace chromatographic quantification of the complete fragrance or the final cosmetic product.

"-" indicates that the substance is not analytically detectable < 1ppm. It could still arise as an impurity in added synthetics or natural ingredients at levels below 1ppm.

Note: By applying the dosage of our fragrance compound to the fractional values* (FV) you will be able to calculate the final classification of your product.

To determine the identity of the sensitizing substances, please refer to the section 3 of the Safety Data Sheet (SDS).

For more details about the final classification you can refer to the official regulation 1272/2008/EC and its amendments.

Please find also a "guidance on the application of the CLP criteria", which provides multiple examples of calculation of fractional values for mixtures and for each hazard category:

http://echa.europa.eu/documents/10162/13562/clp_en.pdf

* FV are defined by the "Concentration of the hazardous substances" divided by "the concentration limit related to the hazard category"

5.81 g/kg (calculated on the basis of empirical data on ingredients from peroral studies in rats).

5. Date and validity

This document is generated by calculation based on the ingredients present in the formula. The information provided herein has been compiled on the below-mentioned date and reflects our knowledge and understanding of the different criteria at this time. The quantities of constituents of this product as indicated in this document may be subject to slight changes due to normal variations of

some raw materials. We will inform you in case a product you have purchased in the last 24 months is affected by a significant variation of constituents from its stated level, where the variation affects quality specification or regulatory status.
